

Significant People

Mae Jemison

Mae was the first black female astronaut in space.

Mae travelled on the Endeavour space mission in 1992.

Mae spent a whole week in space during this mission.

How technology has changed.

A lot of jobs now rely on technology to speed up processes and help us communicate.

Such as: Computers, walkie-talkies, radios, phones, and recording devices.

This is a big change to how early technology was designed, it was bigger, heavier and not able to be moved, not many jobs relied on technology.

Technology: What technology is needed for different jobs?

Old computers could not be moved, were very slow and always had to be plugged in.

New laptops can be moved, have a battery, are faster and can do a lot more.

Vocabulary

Technology—something made by humans to solve problems

Computer—a device that can follow instructions

Device—a machine that has a computer inside.

Astronaut—Means star sailor, someone who travels into outer space.

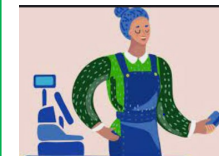

People who help us

Astronauts—Use rockets to travel into outer space.

Emergency services—Police, Firefighters, Doctors and Nurses, they use computers to record information, check people's details, as well as using walkie-talkies and radios to communicate with each other.

Shop Assistants—Use technology such as tills to scan items and work out costs and change.

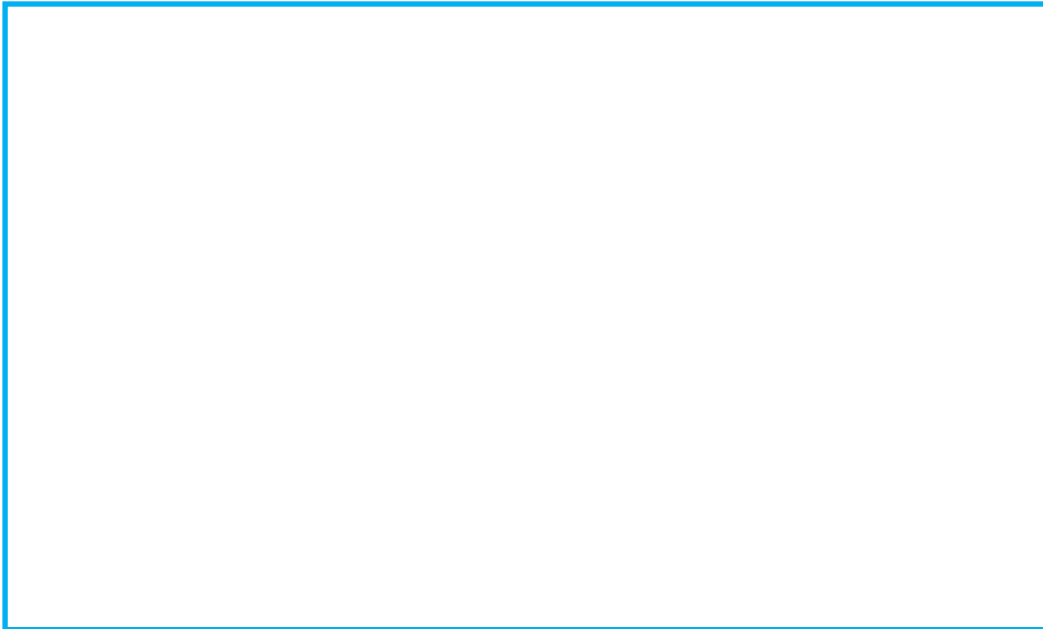

Significant People

Steve Jobs

Alexander Bell

Technology: What do technology do we use everyday?
